

```

public class LinearEq {
    public static void main(String[] args){
        double a = Double.parseDouble(args[0]),
            double b =
Double.parseDouble(args[1]),
            double c =
Double.parseDouble(args[2]);
        System.out.println(a + " * x + " + b + " = "
+ c);
        System.out.println("x = " + ((c - b) / a));
    }
}

```
