```java
public class GenThree {
        public static void main(String[] args) {

                int a = Integer.parseInt(args[0]);
                int b = Integer.parseInt(args[1]);

                int x = (int) (a + Math.random() * (b - a));
                int y = (int) (a + Math.random() * (b - a));
                int z = (int) (a + Math.random() * (b - a));

                System.out.println(x);
                System.out.println(y);
                System.out.println(z);

        System.out.println("The Minimal number generated value was "
+ Math.min(x, Math.min(y, z)));
}
}
```
